

for high performance filtration air, oil and fuel filters

Valvoline® oil filters are carefully designed to meet or exceed OEM requirements for fit and function. These oil filters are carefully tested using SAE J806 procedures to assure compliance with established engineering performance specifications. Consumers can be assured that engine and equipment manufacturers' warranties remain in effect when using Valvoline® oil filters in accordance with engine manufacturers' change intervals.

Valvoline® fuel filters protect the fuel delivery system (e.g. carburetors and fuel injectors) by removing harmful contaminants that can clog or cause premature component wear.

Valvoline® Air Filters measurably reduce the level of harmful contaminants which can accelerate wear on the top compression rings and upper portions of cylinder walls. Removes dirt and harmful abrasives, Valvoline® Air Filters contribute to quality vehicle maintenance as cleaner air intake assures smoother engine operation, greater protection and optimum fuel economy.
