

# for 4 stroke outboards

## enhanced wear and corrosion protection

Valvoline High Performance 4 Stroke Outboard is a premium synthetic blend 4 stroke motor oil designed to meet the requirements of the NMMA FC-W specification. Many outboard manufacturers now specify NMMA FC-W to compliment their modern 4 stroke engine designs. Laboratory testing and real world engine trials shows that engines are protected from corrosion in a way that is not possible with standard passenger car engine oils.

- Offers enhanced wear and corrosion protection, which cannot be met by standard engine oils in the hostile salt-water environments.
- Offers enhanced protection of any 4 stroke outboard engine regardless of age and can be used where standard engine oils were originally specified.
