

# for higher mileage engines fight the 4 main causes of engine breakdown

Keeping your higher mileage car on the road means doing everything you can to protect it from engine breakdown. MaxLife motor oil extends the life of higher mileage engines by fighting the four major causes of breakdown – leaks, deposits, sludge and friction. The synthetic blend formula contains our Multi-Life™ additive system designed to combat these problems unique to older engines. In fact, no leading conventional motor oil is formulated to protect higher mileage engines better.

MaxLife's Multi-Life additive system takes a comprehensive approach to maximising engine life:

- Special seal conditioners rejuvenate seals within the engine block to help prevent oil leaks that lead to sludge and deposits
- Anti-oxidant additives reduce oil viscosity breakdown to help prevent engine-clogging sludge and deposit formation
- Detergents chemically bond with and remove existing sludge and deposits
- Additional friction-reducing additives help reduce abrasion within engine
- Anti-wear agents help prevent engine damage

Give your higher mileage car or truck the extra protection it needs to keep running for a long, long time. Switch to MaxLife today.
